Mohamad Hesari

Senior Backend Engineer / Go, PHP (Laravel)

PROFILE

I enjoy working on the parts of software that are easy to underestimate: data consistency, system boundaries, integrations, failure cases, and the trade-offs behind seemingly simple decisions. Over the past 5 years, I've built backend systems with Go and PHP and taken them from design to production. My goal is to build simple, reliable systems that keep working as they grow.

SKILLS

Languages and APIs	Go, PHP (Laravel), JavaScript (React, Vuejs), gRPC, REST
Data and messaging	PostgreSQL, MySQL, Redis, MinIO, RabbitMQ
Infrastructure	Docker, Docker Swarm, Traefik, HashiCorp Vault, Linux, CI/CD
Logging and metrics	ELK (Elasticsearch, Logstash, Kibana), Prometheus, Grafana

EXPERIENCE

Simorgh — Senior Backend Engineer · remote — Jan 2025 – Oct 2026

Digital signature platform

- Refactored the inherited Go monolith into a modular architecture to simplify package boundaries with minimal disruption to delivery.
- Designed and implemented multi-tenancy and tenant-scoped RBAC for a SaaS platform with 100k+ users and 200k+ documents.
- Built an ERP integration that imports user and contract data from customer-managed SQL Server, Oracle, MySQL, and PostgreSQL databases, with credentials stored in HashiCorp Vault.
- Introduced structured logging, request correlation IDs, ELK-based log aggregation, and production metrics with Prometheus and Grafana.
- Restructured JSON data into normalized tables with foreign keys and indexes, and removed N+1 queries.

Asset-tokenization platform

- Developed an analytics service in Go that runs Sling every 15 minutes to copy new data from five read-only database replicas into a PostgreSQL OLAP warehouse. Wrote its SQL transformations and a Grafana dashboard for user growth, trading volume, and wallet values.
- Designed and implemented a multi-tenant wallet service in Go that supports Bitcoin, Ethereum, and Tron. It handles address generation, on-chain deposit detection, and withdrawal signing. Used by 1,000+ users at an enterprise client.
- Implemented complex KYC and AML checks for user onboarding, including a third-party integration.
- Built fiat payment and settlement services with a third-party payment provider, including a RabbitMQ pipeline for asynchronous processing.

INVERSE School — Senior Backend Engineer — Oct 2023 – Sep 2024

- Reworked payment service boundaries and rewrote a PHP payment service in Go; tested it in staging and deployed it to production.
- Built Go and PHP services and deployed them on Docker Swarm and Traefik across self-managed Linux servers.

Startup Studio Octa — Senior Backend Developer — Aug 2021 – Oct 2023

Crowdfunding platform

- Designed and owned the backend (PHP, Laravel, PostgreSQL, Redis) for 100k+ users, including the stock-market and national KYC integrations.
- Applied TDD and kept test coverage at about 80% with PHPUnit and Pest.

Buy Now, Pay Later platform

- Designed onboarding for third-party merchants, loan tracking, and settlement through a RabbitMQ pipeline.
- Mentored a junior engineer.

Crypto wallet

- Built address generation, on-chain deposit detection, and withdrawal signing for Bitcoin, Ethereum (ERC-20), and Tron (TRC-20). Used by 1,000+ users at an enterprise client.

ModaresaneSharif.ac — Backend Developer — Oct 2020 – Oct 2021

- Built a Laravel application for online class registration and room management, integrated with BigBlueButton for browser-based video classrooms.
- Maintained the company's PrestaShop store and its custom payment module.

EDUCATION

Associate Degree, Software Engineering · Shamsipour Technical and Vocational College · 2019 – 2023
Diploma, Computer Programming · Technical College of Ahrar · 2016 – 2019

Languages Persian (native) · English (upper-intermediate, B2)
