PROFILE

I enjoy working on the parts of software that are easy to underestimate: data consistency, system boundaries, integrations, failure cases, and the trade-offs behind seemingly simple decisions. Over the past 5 years, I've built backend systems with Go and PHP and taken them from design to production. My current focus is becoming exceptionally good at building simple, reliable systems that continue to work as complexity grows.

EXPERIENCE

Simorgh Senior Backend Engineer · remote Jan 2025 - Sep 2026

- Designed and implemented multi-tenancy and tenant-scoped RBAC, replacing the previous global admin model.
- Designed and built an ERP integration that imports user and contract data from customer-managed SQL Server, Oracle, MySQL, and PostgreSQL databases, with credentials stored in HashiCorp Vault.
- Primary backend developer for the Go platform (Gin, GORM, PostgreSQL, MinIO). Refactored the inherited architecture to simplify package boundaries and eliminate recurring import-cycle problems.
- Introduced structured logging, request correlation IDs, ELK-based log aggregation, and production metrics with Prometheus and Grafana. Reduced average production debugging time from 15 minutes to 5.
- Restructured normalized JSON data into relational PostgreSQL tables, adding foreign keys and indexes and eliminating N+1 query patterns.
- Built the fiat payout module for the company's asset-tokenization platform, using Go and gRPC with provider-specific gateway drivers for two payment providers.

INVERSE School Senior Backend Engineer Oct 2023 - Sep 2024

- Planned and executed the migration of a legacy learning platform serving 200k+ users to Moodle-based infrastructure, eliminating recurring production failures.
- Replaced the monolithic infrastructure with Go and PHP services running on Docker Swarm and Traefik across self-managed Linux servers.

Startup Studio Octa Senior Backend Developer · PHP (Laravel) Aug 2021 - Oct 2023

- **Sepehrino** — designed and owned the backend of a crowdfunding platform serving 100k+ users, including PostgreSQL/Redis architecture, stock-market integrations, and national KYC integration.
- Applied TDD throughout the project and maintained approximately 80% test coverage.
- Designed a **Buy Now, Pay Later** platform for third-party merchants, including merchant onboarding, loan tracking, and payment settlement through a RabbitMQ-based pipeline.
- Built a **crypto wallet** supporting Bitcoin, Ethereum/ERC-20, and Tron/TRC-20, including address generation, on-chain deposit detection, and withdrawal signing. Used by 1,000+ users of an enterprise client.
- Mentored a junior engineer.

ModaresaneSharif.ac Backend Developer Oct 2020 - Oct 2021

- Built a Laravel platform for online class registration and room management, integrated with BigBlueButton for browser-based video classrooms.
- Maintained the company's PrestaShop platform, including a custom payment module.

SKILLS

Languages and APIs	Go, PHP (Laravel), JavaScript (React), gRPC, REST
Data and messaging	PostgreSQL, MySQL, Redis, MinIO, RabbitMQ
Infrastructure	Docker, Docker Swarm, Traefik, Linux, CI/CD
Logging and metrics	ELK (Elasticsearch, Logstash, Kibana), Prometheus, Grafana

EDUCATION

Associate Degree, Software Engineering · Shamsipour Technical and Vocational College · 2019 – 2023

Diploma, Computer Programming · Technical College of Ahrar · 2016 – 2019

Languages Persian (native) · English (upper-intermediate, B2)
