PROFILE

I love understanding problems and designing different solutions to them, making trade-offs and taking ownership of the final solution end-to-end. Over the past 5 years of backend engineering across fintech, crowdfunding, crypto, lending, and e-commerce, I have learned that systems play a crucial role in business success. I don't mind getting my hands dirty with legacy code. I have also integrated AI-assisted development into my engineering workflow, which has helped me design better solutions and speed up my development.

I bring Go, PHP, Python and JavaScript as primary languages; PostgreSQL, MySQL, Redis, MinIO, RabbitMQ and Kafka as storage and messaging; Linux, Docker, Kubernetes, Nginx and Traefik as infrastructure and web servers; ELK, Prometheus and Grafana as observability tools; TDD, Unit Test, Smoke Test and Integration Test as testing solutions; OpenCode, Claude, Codex and Hermes as AI tools.

EXPERIENCE

Simorgh — Senior Backend Engineer · remote — Jan 2025 – Oct 2026

Digital signature platform (Go, Postgres, Redis, Asynq)

- Built an ERP integration layer that imports user and contract data from customer-managed SQL Server, Oracle, MySQL, and PostgreSQL databases, with credentials stored in HashiCorp Vault.
- Designed and implemented multi-tenancy and tenant-scoped RBAC.
- Refactored the inherited Go monolith into a modular architecture to simplify package boundaries and achieved better maintainability and increased stability.
- Restructured JSON data into normalized tables with foreign keys and indexes, and removed N+1 queries.
- Deployed automation CI/CD and unit testing stages on Gitlab.

Asset-tokenization platform (Go, Python, Postgres, Kafka)

- Desgined an OLAP system to answer multi dimentional business analytical metrics and data replication among 6 independant micro-services.
- Designed and implemented a multi-tenant wallet service that supports Bitcoin, Ethereum, and Tron. It handles address generation, on-chain deposit detection, and withdrawal signing.
- Implemented complex KYC and AML checks for user onboarding, including a third-party integration.
- Built a financial RabbitMQ pipeline for asynchronous processing of the recurring payments.

INVERSE School — Senior Backend Engineer — Oct 2023 – Sep 2024

(PHP, Go, Postgres, Kafka)

- Reworked payment service boundaries and rewrote a PHP payment service in Go; tested it in staging and deployed it to production.
- Built Go and PHP services and deployed them on Docker Swarm and Traefik across self-managed Linux servers.

Startup Studio Octa — Senior Backend Developer — Aug 2021 – Oct 2023

Crowdfunding platform (PHP, Laravel, PostgreSQL, Redis)

- Designed and owned the backend for 100k+ users, including the stock-market and national KYC integrations.
- Applied TDD and kept test coverage at about 80% with PHPUnit and Pest.

Buy Now, Pay Later platform

- Designed onboarding for third-party merchants, loan tracking, and settlement through a RabbitMQ pipeline.
- Mentored a junior engineer.

Crypto wallet

- Built address generation, on-chain deposit detection, and withdrawal signing for Bitcoin, Ethereum (ERC-20), and Tron (TRC-20). Used by 1,000+ users at an enterprise client.

ModaresaneSharif.ac — Backend Developer — Oct 2020 – Oct 2021

- Built a Laravel application for online class registration and room management, integrated with BigBlueButton for browser-based video classrooms.
- Maintained the company's PrestaShop store and its custom payment module.

EDUCATION

Associate Degree, Software Engineering · Shamsipour Technical and Vocational College · 2019 – 2023
Diploma, Computer Programming · Technical College of Ahrar · 2016 – 2019

Languages Persian (native) · English (upper-intermediate, B2)
