## PROFILE

I enjoy working on the parts of software that are easy to underestimate: data consistency, system boundaries, integrations, failure cases, and the trade-offs behind seemingly simple decisions. Over the past 5 years, I've built backend systems with Go and PHP and taken them from design to production. My goal is to build simple, reliable systems that keep working as they grow.

## EXPERIENCE

### Simorgh — Senior Backend Engineer · remote — Jan 2025 – Sep 2026

**Digital signature platform**

- Designed and implemented multi-tenancy and tenant-scoped RBAC, replacing the previous global admin model.
- Built an ERP integration that imports user and contract data from customer-managed SQL Server, Oracle, MySQL, and PostgreSQL databases, with credentials stored in HashiCorp Vault.
- Primary Go backend developer (Gin, GORM, PostgreSQL, MinIO) in a team of 8, on a platform with 100k+ users and 200k+ documents. Refactored the inherited architecture to simplify package boundaries and eliminate recurring import-cycle problems.
- Introduced structured logging, request correlation IDs, ELK-based log aggregation, and production metrics with Prometheus and Grafana. Reduced average production debugging time from 15 minutes to 5.
- Restructured JSON data into normalized tables with foreign keys and indexes, and removed N+1 queries.

**Asset-tokenization platform**

- Built the fiat payout module using Go and gRPC, with drivers for two payment providers.
- Developed an analytics service in Go that runs Sling every 15 minutes to copy new data from five read-only database replicas into a PostgreSQL OLAP warehouse. Wrote its SQL transformations and a Grafana dashboard for user growth, trading volume, and wallet values.
- Integrated a client bank's KYC API into customer sign-up and its SMS API into login.

### INVERSE School — Senior Backend Engineer — Oct 2023 – Sep 2024

- Planned and executed the migration of a legacy learning platform with 200k+ users to Moodle, which ended its recurring failures in payments, the user dashboard, and course streaming.
- Built Go and PHP services and deployed them on Docker Swarm and Traefik across self-managed Linux servers.

### Startup Studio Octa — Senior Backend Developer · PHP (Laravel) — Aug 2021 – Oct 2023

**Crowdfunding platform**

- Designed and owned the backend (PostgreSQL, Redis) for 100k+ users, including the stock-market and national KYC integrations.
- Applied TDD and kept test coverage at about 80%.

**Buy Now, Pay Later platform**

- Designed onboarding for third-party merchants, loan tracking, and settlement through a RabbitMQ pipeline.
- Mentored a junior engineer.

**Crypto wallet**

- Built address generation, on-chain deposit detection, and withdrawal signing for Bitcoin, Ethereum (ERC-20), and Tron (TRC-20). Used by 1,000+ users at an enterprise client.

### ModaresaneSharif.ac — Backend Developer — Oct 2020 – Oct 2021

- Built a Laravel application for online class registration and room management, integrated with BigBlueButton for browser-based video classrooms.
- Maintained the company's PrestaShop store and its custom payment module.

## SKILLS

| | |
|---|---|
| Languages and APIs | Go, PHP (Laravel), JavaScript (React), gRPC, REST |
| Data and messaging | PostgreSQL, MySQL, Redis, MinIO, RabbitMQ |
| Infrastructure | Docker, Docker Swarm, Traefik, HashiCorp Vault, Linux, CI/CD |
| Logging and metrics | ELK (Elasticsearch, Logstash, Kibana), Prometheus, Grafana |

## EDUCATION

**Associate Degree, Software Engineering** · Shamsipour Technical and Vocational College · 2019 – 2023
**Diploma, Computer Programming** · Technical College of Ahrar · 2016 – 2019

**Languages** Persian (native) · English (upper-intermediate, B2)
